

Gel-infused foams are engineered to improve airflow, release trapped heat and help sleepers stay comfortable throughout the night. Gel memory foam layers are infused with tiny gel particles or beads of thermal gel, which has the inherent property of cooling, to help lower the temperature of trapped body heat.

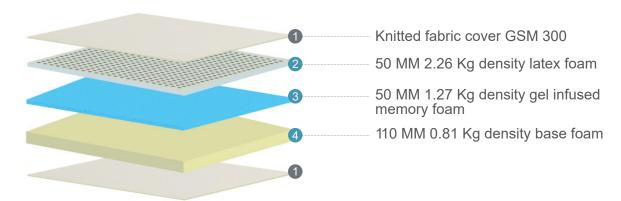

THE BENEFITS OF GEL INFUSED MATTRESS

- **COMFORTABLE:** The Gel Memory foam has enhanced motion transfer resistance, i.e If your partner tosses and turns during the night, then you'll still be able to sleep soundly without being disturbed.
- **BETTER AIRFLOW:** The memory foam is infused with gel particles or beads which allows increased circulation of air. Also, ensures that the heat transmitted from the body during sleep disappears which helps to keep your body cool and comfortable.
- PRESSURE RELIEF: Gel memory foam gently responds to your body's weight and relieves pressure points. By offering unparalleled support, gel memory foam also helps to keep your spine properly aligned while you sleep, reducing back aches and pain.
- BALANCED SUPPORT: A gel memory foam provides you with a compact and comfortable sleep surface. It gives your body a continuous uniform support while in resting position.

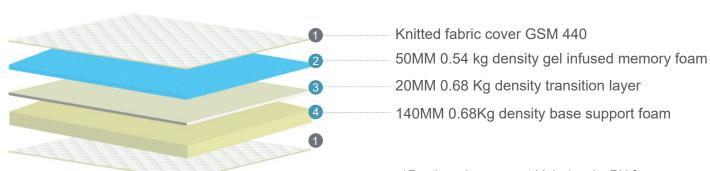

Size	Dimensions (in mm)
